/done lib="Solar". infestans-challenged leaf"
/clone lib="Pp. infestans-challenged with 450,000
XhoI; Whole plants were challenged with 450,000
Sporangia/ml P. infestans US-1(US 940501) in Biotron
sporangia/ml P. infestans US-1(US 940501) in Biotron
(Madison, Wisconsin). Leaf tissue was collected at 1, 2, 5, 12, and 24 hours post-challenge and frozen in liquid
nitrogen immediately upon removal. Kennebec plants showed
no signs of HR. Katahdin plants (susceptible to P.
infestans US-1) were used as controls and showed
infection. NOTE: We cannot exclude the possibility that
this sequence is actually derived from Phytophthora rather
than potato."

excised from lambda ZAP; Site 1: EcoR v; Site 2: EcoR v;
Host leukcytes were extracted from P. vivax infected
blood using the following methods: first, infected blood
was activated by the addition of 0.5 ml of ADP (40mg/ml)
per 10 ml blood. Then blood was passed over a column of
acid washed 0.1 mm glass beads, then through a Plasmodipur
filter, followed by passage through a column of pre-wet
Whatman CF11 powder (1:2 ratio volume of blood to CF11),
and finally centrifuged through a 50% Percoll density
cushion. Purified DNA was digested with mung bean nuclease
in the presence of 44% formamide at 500C as described
(Vernick, KD.) Imberski, R.B. and McCutchan, T.F. 1988.
Nucleic Acids Research 16:6883-6896). Digested DNA was
blunt-ended using 74 DNA Polymerase and size fractionated
over a Sepharose CL-2B column. Fractions in the size range
500bp-4kb were ligated into the Eco RV site of pBluescript
SK(+), and E. coll XL-10 Gold transformed with the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               93 IleAlaLeuLysValAlaGluTyrGlyValAspCysLeuArgIleAsnProGlyAsnIle 112

/lone lib="potato microtubers, in vitro-grown"
/lone lib="potato microtubers, in vitro-grown"
/note="Vector: pBluescript SK(-); Site 1: ECORI; Site_2:
Xhoī; Tissue supplied by Christian Bachem and Richard
Visser (Department of Plant Breeding, Wageningen
University, The Netherlands); sequencing by The Institute
for Genomic Research. The cSTA libraries will attempt to
capture the induction and initiation/initial growth of the
tuber in an in vitro system as described in Bachem et al.
(Plant Journal, 1996). Small microtubers develop from
axillary buds attached to stem explants when placed on a
high sucrose medium (10%). Visible morphological changes
occur synchronously at day five in the axillary buds. The
first library, cSTA (1-20) consists of axillary buds in
harvested on days 1-3. This targets those genes involved
in induction of the microtubers. The following libraries,
cSTA (21-40) and cSTA (41-60), capture genes involved in
tuber initiation and outgrowth. This library is noted as
P3 in Tanksley lab notebooks."

If you are interested in getting corresponding physical clones,
If you are interested in getting corresponding physical clones,
these are publicly available from ZmDB and may be found by BLAST
searching at MSL, maizemap.org; ZmDB, www.zmdb.iastate.edu; TIGR,
www.tigr.org; or NCBI, www.ncbi.nlm.nih.gov. When the source of the
maize cDNA sequences is either Virginia Walbot, Stanford or Pat
Schnable, lowa State, then clones may be requested from ZmDB:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      302
                                                                                                                                                                                                                                                                                                                    This sequence represents a polynucleotide of the invention. It was isolated from Helicobacter pylori and encodes a H.pylori GHPO protein. The polypeptides can be used for preventing or treating Helicobacter infections, and gastroduodenal diseases associated with these including acute, chronic, and atrophic gastritis, and peptic ulcer diseases, e.g. gastric and duodenal ulcers. They can also be used for the production of antibodies. The products can also be used for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              48
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      68

The present invention relates to nucleic acid sequences (ABQ67188-ABQ71212) from Listeria sp. The sequences are useful as probes and primers for identification and/or detection of Listeria (e.g. as contaminants in foods, or mutational analysis) and for analysis of gene expression. Proteins encoded by the nucleic acid sequences can be used to screen for compounds that modulate gene expression, replication and pathogenicity of Listeria (potential therapeutic agents), also for treating infections by Listeria, and are useful as immunogens in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            anti-Listeria vaccines
Note: The sequence data for this patent did not form part
of the printed specification, but was obtained in electronic format
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                for detection
                                                                          Antibacterial; Listeria; food contamination; mutational analysis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            genomic sequences from Listeria species, useful for detection atment and prevention of infection, also related polypeptides.
Listeria monocytogenes 4b contig DNA sequence #1090
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim 14; SEQ ID 1137; 180pp; French

The present invention describes a polynuclectide (I) comprising a sequence of a Bifidobacterium genome selected from the nucleotide sequences given in ABQ81842 and ABQ81843, or a sequence exhibiting at least 90% identity or which hybridises with the sequence given in ABQ81842 and ABQ81843. Also described is a polynucleotide (II) encoding a fusion protein, comprising a sequence selected from 1097 sequences or a fusion protein, comprising a sequence selected from 1097 sequences or a fusion protein, comprising a sequence selected from 1097 sequences or a fusion protein, comprising a sequence selected from 1097 sequences or a fusion protein or a polynucleotide or antibacterial activities, and can be used as an inhibitor of Salmonella. (I) (Which is a probe) is useful for the decection and/or identification of Bifidobacterium longum in a biological sample. A carrier containing the lactic acid bacterium Bifidobacterium longum NCC2705 (CNCM I-2618) can be used for preventing and/or treating diarrhoea brought about by pathogenic bacteria and/or rotavirus. The carrier is a food composition selected from milk, yogurt, curd, cheese, fermented milks, milk based fermented products, ice-creams, fermented cereal based products, milk based fermented from tablets; liquid bacterial suspensions, dried oral supplement, wet oral supplement, dry tube feeding or wet tube feeding. (I) is useful in DNA arrays or chips to carry out analysis of the expression of the Bifidobacterium gene. ABQ81844 to ABQ81850 represent subscience is the present invention but not mentioned further within the sequences are an analysis of the analysis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   specification.
N.B. The sequence data for this patent is not represented in the printed specification but is based on sequence information supplied by the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      41
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          61
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       2
Novel polynucleotide comprising Bifidobacterium genome sequence useful as a probe or primer for detecting and/or identifying Bifidobacterium
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AsnGlnAlaProlleGln---ArgArgLysSerThrArgIleTyrValGlyAsnValPro

The invention describes a method of monitoring differential expression of genes in a first Bacillus cell relative to expression of the genes in coher Bacillus cells, comprising hybridising labelled nucleic acid probes is clocated from Bacillus cells to a substrate containing array of Bacillus cells to a substrate containing array of Bacillus genemic sequenced tags (GST), examining the array, and determining relative gene expression by an observed hybridisation reporter signal of a spot in the array. The method is useful for measuring the expression of genes in a first Bacillus cells relative to expression of the same genes in one or more second Bacillus cells. The method is useful for monitoring new genes, identifying possible functions of unknown open reading frames and contoring gene copy number variation and stability. Monitoring changes in expression of genes may be used to provide a representation of the way in which Bacillus cells adapt to changes in culture conditions, in which Bacillus cells adapt to changes in culture conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   equals one gene or one open reading frame, since sequence information is available. This sequence represents a genomic sequence tag (GST) used in the method of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 24 CGTACAAAAACGCGTCCCGTTAAAGTGGGACCTTTAACAATAGGCGGCAATAACGAAGTC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (ABQ67188-ABQ71212) from Listeria sp. The sequences are useful as probes and primers for identification and/or detection of Listeria (e.g. as contaminants in foods, or mutational analysis) and for analysis of gene expression. Proteins encoded by the nucleic acid sequences can be used to screen for compounds that modulate gene expression, replication and pathogenicity of Listeria (potential therapeutic agents), also for treating infections by Listeria, and are useful as immunogens in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ArgLysSerThrArg---IleTyrValGlyAsnValProIleGlyAspGlyAlaProIle 28
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New genomic sequences from Listeria species, useful for detection, treatment and prevention of infection, also related polypeptides, antibodies and modulators
                                                                                                                                                                                                                                                                             Antibacterial; Listeria; food contamination; mutational analysis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Multiplestry the sequence data for this patent did not form part of the printed specification, but was obtained in electronic for directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             BP; 1731 A; 1065 C; 1209 G; 2150 T; 2 other;

This sequence and fragments of this sequence are useful for selecting probes and primers for detecting genes in L. monocytogenes and related organisms, and to study genetic polymorphisms and other genomes. Proteins (ABB47297-ABB50149) expressed from the present sequence are useful for raising specific antibodies, identification of L. monocytogenes and related organisms, and for biosynthesis and biodegradation, especially blosynthesis of Vitamin B12. This sequence and proteins encoded by it are also useful for selecting compounds that regulate gene expression and cell replication and modulate L. monocytogenes related diseases. In addition, this sequence and proteins encoded by it are useful in pharmaceutical and vaccines compositions for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      the treatment or prevention of infections by L. monocytogenes and related

Proteins encoded by the nucleic acid sequences can be used to sorten for compounds that modulate gene expression, replication and pathogenicity of Listeria (potential therapeutic agents), also for treating infections by Listeria, and are useful as immunogens in

Proteins encoded by the nucleic acid sequences can be used to screen for compounds that modulate gene expression, replication and pathogenicity of Listeria (potential therapeutic agents), also for treating infections by Listeria, and are useful as immunogens in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ద
                                                                                        The present invention describes a gene (I) derived from Buchnera sp. containing the DNA (a) or (b), (a) has a fully defined base pair sequence selected from a table of sequences found in the Buchnera sp. genomic DNA of ABA92787 given in the specification or is a DNA selected from a table of sequences, and (b) is a DNA which hybridises with the DNA (a) and encodes a protein. Also described are: (1) a recombinant vector (II) containing (I); (2) a transformant (III) containing (II); (3) a genomic DNA of Buchnera sp. containing the sequence given in CABA92787; (4) a plasmid derived from Buchnera sp. containing DNA (c) or (d); (c) is a DNA containing a fully defined sequence given in ABA92789 or ABB92789 and (d) is a plasmid which hybridises with a DNA; and (5) a method for the preparation of a protein in which (III) is cultured and the expression protein of the objective protein is collected from the resultant culture. The DNA is useful for developing agricultural chemicals for exterminating cockroaches. The present sequence represents the specifically claimed Buchnera sp. genomic DNA sequence from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   314632 GAAATCATTTCTTACGCAAAAGATGAAAATATTCCAATTCGTATTGGTGTTAATGCTGGA 314691

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   391451
                                                                                                                                                                                                                                                                 Haemophilus influenzae strain Rd. The invention relates to a computer readable medium (CRM) having recorded upon it the complete H.influenzae nucleotide sequence (I), a representative fragment of (I) or a nucleotide sequence at least 99% identical to (I). By providing the full-length genomic sequence, in a computer readable form, it is possible to identify commercially important nucleic acid fragments and expression modulating fragments (EMRs) of the Haemophilus genome. The EMRs can be used to regulate the expression of a nucleic acid molecule. Vectors and altered organisms comprising the predicted ORPS can be used to produce any of the polypeptide fragments of the H. influenzae Rd genome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CysAlaArgAspLysAsnIleProlleArgIleGlyValAsnAlaGlySerLeuGluLys 143

                                                                                                                                                                                                       The invention relates to gcpE nucleic acid molecule, an essential gene of methyl-D-erythritol phosphate (MEP) pathway) that encodes rice, Arabidopsis thaliana or Escherichia call GCPE protein. gcpE is useful. Cor producing a transgenic plant such as Brassica campestris, B. napus, canola, castor bean, coconut, cotton, crambe, linseed, maize, mustard, oil palm, peanut, rapeseed, rice, safflower, sesame, soybean, sunflower, oil palm, peanut, rapeseed, rice, safflower, sesame, soybean, sunflower, oil palm, peanut, rapeseed, rice, safflower, sesame, soybean, sunflower, oil palm, peanut, rapeseed, rice, safflower, sesame, soypean, sunflower, crampession of GCPE protein in organisms increases the level of tocopherol substrate such as isopentyl diphosphate and dimethylallyl diphosphate biosynthesis. Transgenic organisms overexpression GCPE protein in transgenic plant may provide tolerance to stresses of GCPE protein in transgenic plant may provide tolerance to stresses of GCPE protein in transgenic plant may provide tolerance to stresses of GCPE protein in transgenic plant may provide colerance to stresses of GCPE may be used to obtain nucleic acid molecules from the same species, and to obtain nucleic acid homologues. GCPE is also used to determine the level or pattern of expression of the constant semine the level or pattern of expression of the constant semine the level or pattern of expression of the constant semine the level or pattern of expression of the constant semine the level or pattern of expression of the constant semine the level or pattern of expression of the constant semine the level or pattern of expression of the constant seminers are used to be an or protein or stresses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           120

This invention describes a novel method for incorporating gcpE and yfgB genes into viruses and cells for increasing isoprenoid content and identifying e.g. antimicrobial agents. Comprises using DNA sequences (I) from the gcpE or yfgB genes of batteria or parasites or DNA sequences (II) which hybridize to the specified genes or encode a plastid protein with the same biological activity as those encoded by the genes. The invention also describes (I) plant cells containing (I) or (II); (2) transformed plant cells, and transgenic plants regenerated from them, that contain (I) or (II); (3) determining the enzymatic activity of a gcpE protein; or (4) screening compounds (A) that have antimycotic antiparasitic or antiviral activity in humans or animals or antiviral, antiparasitic, fungicidal or herbicidal activity in plants. (I) and (II) or increase the isoprenoid levels in viruses and cells; (ii) for determining the enzymatic activity of gcpE and yfgB proteins; and (iii) to identify compounds that inhibit activity of gcpE, i.e. potential antibacterial, antimycotic, antiparasitic or antiviral agents for use in humans or animals, or antiviral, antiparasitic, fungicidal
                                                                          rating gcpE and yfgB genes into viruses and cells, for ing isoprenoid content and identifying e.g. antimicrobial comprises using DNA sequences from bacteria or parasites
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1119

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is that of the Escherichia coli FUN gene gcpE, which encodes a protein that is essential for bacterial growth or survival. gcpE is 1 of 22 E. coli genes (see level or survival. gcpE is 1 of 22 E. coli genes (see level or survival. gcpE is 1 of 22 E. coli genes (see level or survival. gcp. being essential (there is no deletion genotype). These 22 genes fulfil criteria for being attractive attabacterial targets: hypothetical open reading frames coding for essential functions (mutation is lethal for growth in rich media); broad conservation (orthologues are present in a wide range of broad conservation (orthologues are present in a wide range of the broad conservation (orthologues are present in a wide range of the brochertial in higher organisms (mostly no orthologues were identified expression of an essential gene or of its function provides the key for antibacterial therapy. The invention provides methods for contacting a bacterial cell comprising an essential gene with a candidate antagonist or inhibitors. These involve contacting at a bacterial cell comprising an essential gene with a candidate arragonist or inhibitor, and testing whether contact leads to cell growth inhibition and/or cell death. The method allows the development of new broad spectrum antibiotics. A conditional mutant of an essential gene can be used to induce a lethal phenotype in bacteria for the analysis of surrogate markers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          61 CCGATTGGCGATGGTGCTCCCATCGCCGTACAGTCCATGACCATACGCGTACGACAGAC 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    420
                                                                                                                                                                                                                                                                                                                                                The present invention relates to antagonists and inhibitors of 24 bacterial genes and proteins. The proteins are thought to be essential for growth in several species of bacteria (including S. pneumoniae, B. burgdorferi, H. influenza and H. pyloril). The proteins and coding sequences shown in the specification can be used to identify antagonists and inhibitors which can be used in disease treatment and pesticides. In particular, they can be used against M. tuberculosis. The present sequence is one of the genes of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               9

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed,

and is derived by analysis of the total score distribution.

// Lone | Morponic culture. At 8 days of age, medium was supplemented with 1 mM salicylic acid (SA). Roots and shoots were harvested after 27 and 72 hr and material from both time points was combined prior to RNA isolation.
Double-stranded cDNA was cloned unidirectionally into different Drall sites of the pME188-FL3 vector (5-prime Drall site is CACCATGTG
). XhoI excises the CDNA insert."
